To update your current programming and machining processes and reap the benefits of the technology advancements of the last few decades, it's important to view the process as a whole instead of focusing on a specific aspect of manufacturing the part.

### **Advances in CNC Technology - Advanced Manufacturing**

In the past, single point diamond machining was a manufacturing technology restricted to infrared applications, due to the more forgiving nature of the optical requirements with regard to figure/form and finish/micro-roughness.

Machining is one of the most important manufacturing processes. Parts manufactured by other processes often require further operations before the product is ready for application. Machining: Fundamentals and Recent Advances is divided into two parts. Part I explains the fundamentals of machining,
