Abstract. We use a unique administrative dataset of over 10,000 taxi drivers in Singapore to study the labor supply decisions of these drivers. Our results indicate that both intra-day and across days, cab drivers deviate from the neoclassical economic model and that their labor supply is affected by a reference level of income.

The first type arises from traditional sales data from UPC scanners combined with inventory data from ERP or SCM software. This data source, marked #1 in Fig. 2, enables an overview of the 4Ps (product, price, promotion and place at the level of store, aisle, shelf, etc.). One can include syndicated datasets (such as those from IRI or Nielsen) also into this category of data capture.
