An electrical network is an interconnection of electrical components (e.g. batteries, resistors, inductors, capacitors, switches) or a model of such an interconnection, consisting of electrical elements (e.g. voltage sources, current sources, resistances, inductances, capacitances). An electrical circuit is a network consisting of a closed loop, giving a return path for the current.

Finally Complete! Enjoy. Cool stuff today, folks, cool stuff. As was mentioned in the first article about the Burton induction cooktop, we traced out the circuit and found some very interesting tidbits to share. This device is amazingly simple! It's actually a self-oscillating resonant drive with integrated power control.
