

### **diffraction and direct methods pdf**

A diffraction grating is an optical component with a regular pattern. The form of the light diffracted by a grating depends on the structure of the elements and the number of elements present, but all gratings have intensity maxima at angles  $\theta_m$  which are given by the grating equation  $(\sin \theta_i + \sin \theta_m) = \frac{m\lambda}{d}$  where

### **Diffraction - Wikipedia**

In optics, a diffraction grating is an optical component with a periodic structure that splits and diffracts light into several beams travelling in different directions. The emerging coloration is a form of structural coloration. The directions of these beams depend on the spacing of the grating and the wavelength of the light so that the grating acts as the dispersive element.
