ON SOME NONLOCAL EVOLUTION EQUATIONS ARISING IN MATERIALS SCIENCE PETER W. BATES
Abstract. Equations for a material that can exist stably in one of two homogeneous states are derived from a microscopic or lattice viewpoint with the assumption that the evolution follows a gradient flow of the free energy with respect to some metric.

ON SOME NONLOCAL EVOLUTION EQUATIONS ARISING IN MATERIALS

This book deals with the modeling, analysis and simulation of problems arising in the life sciences, and especially in biological processes. The models and findings presented result from intensive discussions with microbiologists, doctors and medical staff, physicists, chemists and industrial engineers and are based on experimental data.

â€œThe general aim of this book is to derive and treat partial differential equations of reaction-diffusion-convection type with degeneracies modelling some problems in the life sciences. â€ a valuable source of reference for researchers using partial differential equations for modelling biological processes.
