Antigen-Specific Memory T-Cell Responses. Memory T cells, which are generated as part of the primary antigen-specific T-cell response, are defined by function (i.e., more rapid effector response) and by expression of a CD45RA⁺ CD45RO⁺ surface phenotype.

Memory T cell - an overview | ScienceDirect Topics

memory T cells fall on a continuum within each of these and other parameters. We discuss how this continuum influences the way that the efficacy of vaccination is assessed, as well as the suitability of a memory population for protective immunity. INTRODUCTION What is T cell memory? This deceptively simple question is hard to answer.

Understanding Subset Diversity in T Cell Memory

T cells can have "mixed" phenotypes (that is, have characteristics usually associated with more than one T cell subset) and can interconvert from one subset phenotype to another, although instructive signalling can lead to long-term fixation of cytokine memory.
